

TIREFILL/FOAM FILL RUBBER/POLYURETHANE-PUMPED INTO THE TYRE

- Tirefill is a liquid rubber/ chemical compound consisting of A and B drums
- Which are pumped into pneumatic air tyre is at high pressure and cure overnight , until solidified to make a soft solid insert in the pneumatic air tyre and make the tyre puncture proof
- Most mining machines are forced to use this product underground for successful performance and many of the Access High Reach machines also require tirefill to be pumped for safety requirements
- We have a Tirefill pumping facility in Durban for all tire sizes
